Aging in Boston

Preparing today for a growing tomorrow

SPRING 2014

A research report from the City of Boston’s Commission on Affairs of the Elderly and the Gerontology Institute at UMass Boston
About the Authors

This report was prepared by the Center for Social and Demographic Research on Aging, in consultation with staff from the City of Boston Commission on Affairs of the Elderly. Individuals responsible for the report include Jan E. Mutchler, Bernard A. Steinman, Caitlin Coyle, Hayley Gleason, Jiyoung Lyu, and Ceara Somerville.

Acknowledgments

The authors are grateful to Emily Shea, Commissioner on Affairs of the Elderly, for her leadership as the report was conceptualized and developed. We thank Melissa Carlson, Deputy Commissioner for Advocacy and Planning, and Tula Mahl, Deputy Commissioner for Communication and Policy, for their insight and advice throughout the creation of this report. Ellen Bruce, Director of the Gerontology Institute at UMass Boston, provided valued advice and support. We also appreciate the assistance of staff at the Boston Redevelopment Authority who provided guidance on developing neighborhood data.

Past and future growth of the senior population in Boston

An escalating number of Boston residents are becoming “seniors” on a daily basis. According to the 2010 Census, roughly 88,000 Boston residents were age 60 or older, reflecting an increase of 11% between 2000 and 2010 in the number of Boston seniors and far outpacing growth in the size of the all-age population of Boston, which increase by just 5% during the decade. In coming years, the number of seniors is expected to continue to grow at a rapid pace (see Figure 1). Three sets of projections are presented in Figure 1, all suggesting that the number of Boston residents age 60 or older will increase substantially in coming years. Projections suggest that by 2030, between 120,000 and 130,000 seniors will reside in Boston. These projections indicate that the share of Boston residents who are seniors will be approaching 20% within just a few years, up from 14% based on the 2010 U.S. Census.

Figure 1A: Number of Boston residents age 60+, 1990-2010, and projections to 2030

Source: Donahue projections are prepared by the UMass Donahue Institute (http://pep.donahue-institute.org/). MAPC projections are prepared by the Metropolitan Area Planning Council (MAPC), an organization based in Boston. MAPC-high projections assume stronger population growth and are recommended by MAPC for use by municipalities.
Figure 2A: Growth of the older population, Boston residents, 2000-2010

The absolute size of the population age 60 and over grew by 11% between 2000 and 2010. This rate of growth was about twice the percentage growth for the total population of Boston (all ages, which grew by 5%). Growth in the senior population was largely the result of growth in the number of Boston residents age 60 to 69, which represents the leading edge of the Baby Boomer population. The percentage of individuals age 60 to 69 increased by 30% between 2000 and 2010, and the percentage of individuals age 80 and over also grew slightly (5%) during this time period. By contrast, the percentage of persons age 70 to 79 decreased by 10%.
Figure 3A: Percent of residents age 60+ by neighborhood

Boston is composed of many distinctive neighborhoods, many of which include a substantially larger share of seniors than others. The 2010 Census showed that 14% of Boston’s residents are age 60 or older. In some neighborhoods, such as Bay Village, Chinatown, West End, and West Roxbury, the share age 60+ is considerably higher than the Boston average. Conversely, some neighborhoods have very small shares of seniors in their populations, including Allston (6%), Fenway (6%), and Longwood Medical (1%).

Source: Boston Redevelopment Authority neighborhood profiles
http://www.bostonredevelopmentauthority.org/research-maps/research-publications/neighborhoods
Gender, Race and Ethnic Composition and Change in Boston

Figure 4A: Percentage female by age, Boston residents, 2010

In 2010, half of Boston’s population under age 20 was female. In older age groups, a larger share of the population is female, largely due to longer average life expectancies of women. Among individuals age 60 to 79, 56% were female. Among residents age 80 and over, women outnumber men by more than two to one.

Source: Census 2010 American FactFinder Table QT-P1
Boston’s status as a “majority-minority” city was established in 2000, when the share of residents who identified as Hispanic, African American, Asian, or other nonwhite races increased above 50% for the first time\(^1\). Boston’s senior population is quickly approaching that same designation: in 2010, 45% of seniors were persons of color.

**Figure 5A: Change in number of Boston residents age 60+, by race and ethnicity, 2000-2010**

Changes in the diversity of the older population are notable over the last decade. As illustrated in Figure 5, the number of seniors who are White declined by 3% between 2000 and 2010. In contrast, the nonwhite population age 60 and over grew considerably. The number of Black seniors increased by 37%; the number of older adults who are Asian, Native Hawaiian or Pacific Islander increased by 52%; and seniors reporting some other race or a combination of races grew by 35%. In addition, the number of Latinos age 60 and over in Boston increased by 85% during that time period, nearly doubling in number.

1 Unless otherwise indicated, all data in this report are from the U.S. Census Bureau decennial census program or American Community Survey program.
Projections are not available by ethnicity and race for older age groups, yet trends in recent years suggest that the diversity of the older population will continue to evolve. A comparison of today’s seniors with slightly younger age groups also supports this conclusion. Data from the 2010 Census show that one-quarter of Boston seniors are Black or African American, while 9% are Asian, Native Hawaiian or Pacific Islander and 7% are some other race, or report more than one race (see Figure 6). Among those who are age 45-59, larger shares report nonwhite race. Year by year, as midlife individuals age into their 60s and beyond, racial diversity within the senior population will increase. The percentage of seniors who are Hispanic or Latino will also expand in coming years. The share of adults age 45-59 who are Hispanic, at 16%, is considerably higher than the share of today’s seniors who are Hispanic (10%). Boston seniors in coming years will include considerably more Hispanics as these individuals move into later life.
In 2010, Boston had nearly 253,000 occupied housing units. More than one-quarter of these units (26%) included at least one member age 60 or over; 19% included at least one member age 65 or over.
In 2010, Boston had more than 58,000 occupied housing units headed by adults age 60 or over. Forty-seven percent of these homes were owner-occupied (that is, the older adult resident owned the home). Fifty-three percent of the older householders rented their homes.

Source: Census 2010, American FactFinder Table H17
A large share of occupied housing units in Boston are headed by adults age 60 and over. Nearly one-third (32%) of owner-occupied units are headed by seniors, as are 19% of renter-occupied units. Nearly one quarter (23%) of all occupied housing units are headed by someone age 60 or older.
Small proportions of Boston adults age 45 to 59 and age 60 to 79 reside in institutional settings such as nursing homes. The number of older adults living in institutional settings increases dramatically after the age of 80, with 12% residing in nursing homes. Of all older adults age 60 and over, 4% live in nursing homes, and 1% resides in another type of group living facility.
A majority of Boston residents live in the community and share a household with others. Seventy-eight percent of adults age 45 to 59 live with a spouse and/or with others, while 22% live alone. The likelihood of an adult living alone increases with age. Among adults age 80 and older, the majority (51%) live alone.
A three-generation household is defined as occurring when members of three generations in the same family share living quarters. For example, when an older woman shares a residence with her daughter and grandson. In Boston, 7% seniors age 60 and over live in three-generation households.
Figure 13A: Percentage caring for grandchildren by age, Boston residents, 2007-2011

Grandparents who live in the same home as a grandchild and who report that they are primarily responsible for the care of that child are defined as “grandparent caregivers.” Among Boston residents age 45 to 59, 3% are caregivers to one or more grandchildren, dropping slightly to 2% for individuals age 60 to 79. No data are available on the number of grandparents who provide childcare and support to grandchildren with whom they do not live.

Note: Data excludes individuals who live in an institutional setting.

Source: American Community Survey IPUMS data, 5 year file, 2007-2011
Demographic Characteristics of Older Boston Residents

Figure 14A: Marital status by age, Boston residents, 2007-2011

As would be expected, marital status changes as people age. Among Boston residents age 45 to 59, 46% are married and only 3% are widowed. In contrast, among residents age 80 and over, only 29% are married but nearly half (48%) are widowed. For the total population age 60 and over, 44% are married, 22% are widowed, 18% are divorced or separated, and 16% have never been married.

Note: Data excludes individuals who live in an institutional setting.
Source: American Community Survey IPUMS data, 5 year file, 2007-2011
As people age, they are less likely to move to a new residence. Of Boston residents age 45 to 59, 88% lived in the same house in the previous year, compared to 94% of residents age 80 and over. For all residents age 60 and over, the vast majority (93%) remained in the same house. Among residents age 60 and over, 3% lived elsewhere in Boston in the previous year and another 4% lived outside of Boston in the previous year.
Many older Boston residents have served in the armed forces during their lifetimes. Among all residents age 60 and over (men and women combined), 13% are veterans. Of men age 60 and over, 30% are veterans. The proportion of the population who is a veteran increases significantly with each successive age cohort. Half of the men age 80 and over have served in the armed forces.
Socioeconomic Characteristics of Older Boston Residents

Figure 17A: Educational attainment by age, Boston residents, 2007-2011

Educational attainment varies by age cohort, with older groups typically having completed less formal schooling than younger cohorts. Among Boston residents age 60 and over, 28% have completed less than high school, 31% have a high school degree only, 15% have some college, and 26% have attained a bachelor’s degree or higher degree. Of residents age 45 to 59, 21% have some college and 34% have a bachelor’s degree or higher. By comparison, only 13% of those age 80 and over have completed some college and 16% have earned a bachelor’s degree or higher.

Note: Data excludes individuals who live in an institutional setting
Source: American Community Survey IPUMS data, 5 year file, 2007-2011
Among Boston residents age 45 to 59, 62% are employed full-time, and another 10% are employed part-time. In contrast, only 25% of Boston residents age 60 to 79 years are employed full-time, 9% are employed part-time, and 66% are not in the workforce. Among residents age 80 and over, the vast majority is not employed (97%).

Note: Data excludes individuals who live in an institutional setting.
Source: American Community Survey IPUMS data, 5 year file, 2007-2011
As they transition from work into retirement, older Boston residents may rely on Social Security, pensions or other retirement savings programs, or savings as sources of income. Other forms of income, particularly earnings, often decrease, resulting in lower net personal incomes. Among Boston residents age 45 to 59, the median total personal income is over $32,000 per year, and the median household income is over $68,000. For residents age 60 to 79, median personal and household incomes drop substantially to $18,000 and $43,768, respectively. Incomes are even lower among residents age 80 and over, with median personal incomes of $13,100 and median household incomes of $23,136.
Figure 20A: Percentage of Boston residents age 65 and over whose total personal income includes only Social Security or Social Security and SSI, 2007-2011

Many older adults do not have savings, retirement savings accounts, or pensions to rely on after they retire from work. Instead, they depend on Social Security as their sole means of support. Of Boston residents age 65 and over, more than one-third is reliant on Social Security as their only source of personal income. Older adults who experience financial difficulty or who have a disability may qualify for Supplemental Security Income (SSI). About 36% of Boston residents age 65 and over report Social Security and SSI as their only sources of personal income. Many of these individuals live with others in the same housing unit, who have additional sources of income that are shared among household members.
Many older adults struggle financially in their later years. Particularly in Boston where housing costs are high, a large percentage of the older population experiences high cost burden, or housing costs that represent 30% or more of their household income. Among Boston residents age 60 and over, 50% of renters and 38% of those who reside in an owned home experience high cost burden. High cost burden is most prevalent among individuals age 80 and over, with 41% of renters and more than half of those who live in an owned home paying greater than 30% of their incomes for housing.
Due to financial difficulty, many of Boston's older adult residents may rely on government assistance programs such as the Supplemental Nutrition Assistance Program (formerly, food stamps). Of those who are 45 to 59 years old, 15% live in households that receive food stamps. One out of five Boston residents age 60 and over receive food stamps.
Housing Features of Older Boston Residents

Figure 23A: Percentage of Boston residents living in rented or owned home by age, 2007-2011

Among older Boston residents, the proportion that lives in a rented home remains relatively stable across age groups, ranging between 48% and 51%. In contrast, the percent living in an owned home with a mortgage declines among those who are older while those who live in an owned home free and clear increases. Among those age 45 to 59, 41% live in an owned home with a mortgage and 9% live in an home owned free and clear; whereas among residents age 80 and over, only 15% own a home with a mortgage and 35% own a home without a mortgage.

Note: Data excludes individuals who live in an institutional setting.
Note: Categories are defined based on the tenure status of the home in which the older adult lives; someone within the household other than the older adult may be the owner or renter of the home.
Source: American Community Survey IPUMS data, 5 year file, 2007-2011
Figure 24A: Percentage living in a crowded home (one or more persons per room) by age, Boston residents, 2007-2011

Note: Data excludes individuals who live in an institutional setting.
Source: American Community Survey IPUMS data, 5 year file, 2007-2011

The cohort of Boston residents age 45 to 59 has the highest proportion of people living in homes with one or more persons per room (12%). The percentage declines with age, with 10% of Boston residents age 60 to 79, and 8% of residents age 80 and over living in a crowded home.
A majority (60%) of Boston residents age 45 and over live in homes that were built in 1939 or earlier. Among residents age 60 and over, approximately 54% live in housing units built in 1939 or earlier. Living in older homes may present challenges to older adults who may have difficulties with home maintenance, or who live in homes with design features that are not appropriate for their needs.
Many older Boston residents have only limited access to vehicles within their household. Only 50% of residents age 80 and over have one or more vehicles available to household members. For residents age 60 and over, 64% have at least one vehicle available in the household.

Note: Data excludes individuals who live in an institutional setting.

Source: American Community Survey IPUMS data, 5 year file, 2007-2011
Among Boston residents age 60 and over, 22% live in a single family detached home, and 7% live in a single family attached home. The most commonly reported housing type among older adults are buildings with ten or more families (30%), and buildings with three to nine families (25%). More than one-third of adults age 80 and over live in large buildings that house 10 or more families.
Language, Immigration and Citizenship of Older Boston Residents

Figure 28A: English proficiency by age, Boston residents, 2007-2011

English proficiency levels among Boston residents are similar across age cohorts. Of all residents age 60 and over, 67% speak only English, 7% speak English very well, 6% speaks English well, 12% speaks English, but not well, and 8% do not speak English. A sizable percentage of residents who are age 80 and over (11%) speak no English at all.
In Boston, nearly one in five residents age 60 and over live in households in which all members age 14 and older have some difficulty speaking English (that is, no members speak English only, or “very well”).

Note: Data excludes individuals who live in an institutional setting.
Source: American Community Survey IPUMS data, 5 year file, 2007-2011
Although the majority of Boston residents age 60 and over speaks only English at home, one-third speaks another primary language. Nine percent speak Spanish as their primary language, 5% speak Chinese, 3% speak French Creole, 3% speak Russian, and 13% speak some other language. Spanish is much more commonly spoken by adults age 45 to 59 than among adults age 60 and over (16%, compared to 9%).
Nearly two-thirds of Boston residents age 60 and over were born in the United States, a U.S. territory, or abroad of U.S. parents. Another 25% of residents 60 and over are naturalized citizens. The final 11% are not citizens of the United States.
Health & Disability of Older Boston Residents

Figure 32A: Percentage reporting a disability by age, Boston residents, 2009-2011

The proportion of Boston residents with a disability increases dramatically with age. Among residents age 45 to 59, just 17% report a disability; whereas 29% of individuals age 60 to 79 and 62% of persons age 80 and over report at least one disability. Among all residents age 60 and over, just over one-third report at least one disability.

Note: Data excludes individuals who live in an institutional setting.
Source: American Community Survey IPUMS data, 3 year file, 2009-2011
Many adults experience multiple disabilities as they grow older. The majority of Boston residents age 45 to 59 report no disability; however, with age, the incidence of disability increases. Among residents age 60 to 79, 14% report one disability, 8% report two, and 7% reported experiencing three or more disabilities. Of residents age 80 and over, 20% report one disability, 14% report two disabilities, and 28% report three or more disabilities.
Relative to younger seniors, the oldest residents of Boston are at an increased risk for all specified forms of disability. Nearly 40% of residents age 80 and over have ambulatory difficulty and independent living difficulty. Nearly one out of five reports cognitive difficulty, and a similar share reports self-care difficulty. The most common form of disability reported by younger seniors age 60 to 79 is ambulatory difficulty, reported by one out of five young seniors.
Figure 35A: Percent with good or excellent self-rated health by age, Boston residents, 2010

Note: Data excludes individuals who live in an institutional setting.

Self-report of health has been shown to be a relatively accurate proxy for an individual's overall physical health. Thus, it might be expected that with age, adults would report a decline in their overall self-rated health. Among Boston residents who are between the ages of 45 and 64, 82% report good or excellent self-rated health, compared to 74% who are age 65 and over.
Figure 36A: Percent engaging in regular physical activity* by age, Boston residents, 2010

Just over half of Boston residents age 45 to 64 participate in regular physical activity. Among residents age 65 and over, 44% participate in regular physical activity.

*Regular physical activity defined as vigorous activity for 20 minutes/day on 3+ days a week, or moderate activity for 30 minutes/day on 5+ days/week

Note: Data excludes individuals who live in an institutional setting.

Chronic health conditions are extremely common and particularly challenging for older adults. Asthma affects about 10% of Boston residents age 49 to 59 and a similar share of adults age 60 and over. In contrast, high blood pressure and diabetes increase with age. When comparing residents age 49 to 59 with individuals age 60 and over, the percentage of adults with diabetes increases from 10% to 19%. Among residents age 49 to 59, 33% have high blood pressure; this proportion increases to 58% among residents age 60 and over. Obesity is the only chronic condition among those listed that decreases with age, declining from 25% of those age 49 to 59 to 22% of those age 60 or more.
Profiles of Older Boston Residents, by Neighborhood

Boston is a city made up of distinctive neighborhoods, with unique histories, cultural backgrounds, and amenities. Demographic data presented here, highlight ways in which Boston neighborhoods differ in terms of the size and character of their older populations.

http://www.bostonredevelopmentauthority.org/neighborhoods

---

2 The neighborhoods described in this section align with “planning districts” as described by the Boston Redevelopment Authority (http://www.bostonredevelopmentauthority.org/research-maps/research-publications/neighborhoods) and are defined by census tracts.
In 2010, 7,854 adults age 60 and older lived in Allston-Brighton. Forty-one percent of these individuals were between the ages of 60 and 69. Twenty-eight percent were age 80 or older.
Gender composition, Allston-Brighton residents age 60+, 2010

In 2010, more than half (60%) of Allston-Brighton senior residents were female and 40% were male.

Source: 2010 Census, SF1, Table P12
In 2010, the senior population age 60+ in Allston-Brighton was predominately White (75%). Seventeen percent of Allston-Brighton seniors were Asian or Native Hawaiian/Pacific Islander, 5% were Black or African American, and 3% reported some other race or more than one race.

Source: 2010 Census, SF2, Table P12
In 2010, 5% of the Allston-Brighton senior population reported being Hispanic or Latino. Latino ethnicity is reported separately from race; as a result, Latinos and non-Latinos may be of any race.
In 2010, Allston-Brighton had 30,610 occupied housing units. Nineteen percent of these households included at least one member age 60 or older; and 15% included at least one member age 65 or older.
Owner status, housing units with a householder age 60+, Allston-Brighton, 2010

In 2010, there were 5,280 housing units headed by an adult age 60 or older in Allston-Brighton. Among them, 62% were renter occupied and 38% were owner occupied.

In 2010, Back Bay-Beacon Hill, South Boston and West Roxbury had the highest proportion of White senior residents (all over 90%). Mattapan and Roxbury had the highest proportion of Black or African American seniors (86% and 70%, respectively). Downtown-North End and the South End had the highest proportion of Asian and Native Hawaiian/Pacific Islander senior residents (30% and 22%, respectively) and North Dorchester and Roxbury had the highest proportion of seniors who reported being of another race or of more than one race (17% and 16%, respectively).
In 2010, 20% of Jamaica Plain and Roxbury senior residents reported being Hispanic. East Boston, Roslindale and the South End had at least 15% of their senior residents reporting that they were of Hispanic ethnicity.
Percentage speaking English “not well” or “not at all”, Boston seniors age 65+, by neighborhood, 2010

Over one-third or more of the seniors in the Allston-Brighton, Fenway-Kenmore, North Dorchester, and South End neighborhoods reported speaking English “not well” or “not at all.”
More than half of the seniors in the Allston-Brighton neighborhood are foreign-born. In addition, the Fenway-Kenmore, North Dorchester and Roslindale neighborhoods have over 40% of their senior residents reporting foreign birth.
Seventy percent of senior-headed households in the Fenway-Kenmore neighborhood, 65% of those in the South End and 55% of those in Roxbury and Downtown-North End report an annual income of less than $20,000.
In 2010, more than one-third of all households in West Roxbury (39%), Hyde Park (37%) and Mattapan (35%) included one or more seniors age 60 and older.
In many Boston neighborhoods, the majority of senior householders rent their homes. The highest percentage of homeownership among seniors is in the Back Bay-Beacon Hill, Hyde Park, Roslindale, and West Roxbury neighborhoods.
In 2010, across all of the neighborhoods, at least one-quarter of senior residents lived alone. The highest percentage of seniors living alone is in the Fenway-Kenmore neighborhood, followed by the Back Bay-Beacon Hill, Downtown-North End, Charlestown, and South End neighborhoods.
**About the City of Boston Commission on Affairs of the Elderly**

The mission of the City of Boston Commission on Affairs of the Elderly is to enhance the quality of life for Boston's older adults through developing, planning, coordinating, implementing, and monitoring the delivery of programs and services to older adults in an efficient and effective manner. These activities are provided in conjunction with federal, state, and city agencies, along with neighborhood service providers and senior groups. The Commission, as Boston's Area Agency on Aging and Council on Aging, promotes the active involvement of seniors in the life and health of their neighborhoods. For more information, visit the Commission website: [www.cityofboston.gov/elderly](http://www.cityofboston.gov/elderly).

**About the Gerontology Institute**

The Gerontology Institute in the John W. McCormack Graduate School of Policy and Global Studies, University of Massachusetts Boston, addresses social and economic issues associated with population aging. The Institute conducts research, analyzes policy issues, and engages in public education. It also encourages the participation of older people in aging services and policy development. In its work with local, state, national, and international organizations, the Institute has five priorities: (a) productive aging, that is, opportunities for older people to play useful social roles; (b) health care for older adults; (c) long-term care for older adults; (d) economic security for older adults; and (e) social and demographic research on aging. The Institute pays particular attention to the special needs of low-income and minority seniors. For more information about the Gerontology Institute, please visit [www.geront.umb.edu](http://www.geront.umb.edu).

**About the Center for Social and Demographic Research on Aging**

The Center for Social and Demographic Research on Aging promotes the demographic and applied research capacity within UMass Boston's Gerontology Institute. The Center aims to serve the research and evaluation needs of municipalities, states, and organizations that serve older adults in the community, as well as provide interdepartmental support for UMass Boston faculty and staff with shared interests. The Center also provides training for students in the Gerontology PhD Program at UMass Boston. Areas of special interest include economic security in later life; well-being and quality of life; community supports for older adults; evaluating programs designed for older adults; and demography and diversity of the aging population. For more information, please visit [www.umb.edu/demographyofaging](http://www.umb.edu/demographyofaging).
